Professional Summary

I am a dedicated and creative Software Engineer based in Lagos, Nigeria, with over three years of experience in full-stack web development, UI/UX design, digital strategy, and social media management. I specialize in building efficient, user-friendly, and scalable web applications using modern tools such as HTML, CSS, JavaScript (ES6+), React, Firebase, and Node.js.

As a self-driven developer, I've led multiple independent projects most notably a Jumia-style e-commerce platform (Mini Jumia) and a real-time weather web application. These projects demonstrate my ability to implement complex features such as real-time order tracking, Firebase authentication, dynamic content updates, and responsive design. I'm comfortable working with APIs, cloud hosting, and service workers for offline capabilities.

In addition to technical work, I've served as a Social Media Manager at Regamos Foundation and Sara Foundation, where I increased audience engagement by over 300%, managed campaigns, and built digital identities. I also gained practical exposure through virtual internships with top firms via Forage, including projects from JPMorgan Chase, Accenture, and Goldman Sachs.

I'm currently pursuing a Bachelors degree in Software Engineering at FUNAAB, where I'm ranked in the top 5% of my class. I'm actively involved in developer communities such as the Google Developer Student Club (DSC) and the IEEE Student Branch, and I mentor youth through Tech for Lagos community initiatives.

With a strong foundation in development and a passion for using tech to solve real-world problems, I

bring both creativity and discipline to any project or team I join.
